with plastic pumps

what price plastic pumps? . . . mighty low -- when you order them in quantity! And pump performance, reliability stays right up there with the all-metal centrifugal pumps. The new Eastern FK-FD-17, FK-FD-34 series offer pressures to 18 psi, flows to 17 gpm. Kralastic pumps are suited to temperatures up to 130° F., are inert to wide variety of dilute acids and alkalis. Penton pumps are resistant to all inorganic acids except fuming nitric and fuming sulfuric — and to temperatures as high as 220° F. Both types show excellent impact shock resistance, and are particularly suited for applications such as continuous duty pilot plants, laboratory and industrial applications like film processing, ultrasonic equipment, and filter cleaning systems.

THIS FRACTION COLLECTOR IS

GOOD NEWS!

When laboratory instruments combine reliable solid state circuitry with low cost and compact size, that's good news. And that's ISCO's Model 270 Fraction Collector.

The highly dependable Model 270 features lift-off reels with 90 or 180 tube capacities and is ideally suited for either classroom or research use. At as little as \$190.00 complete, it is the lowest priced fraction collector available, yet it still incorporates both timed and volumetric control.

ISCO's other Fraction Collectors are good news too! The Model A is available for any combination of timed, drop counting, siphon or Volumeter (adjustable volumetric dispenser) operation and is equipped with a 240 tube reel. The Model AT offers much of the economy of the Model 270 and the flexibility of the Model A. The Model 240 is a preparative Fraction Collector especially designed for large volume collecting. All ISCO Fraction Collectors can be used in a cold room with no modifications and have a one year guarantee.

For more information about ISCO Fraction Collectors, please ask for Brochure FC31k.
