

**Are you up to speed
on silicones?**

In the world of silicones, slow and steady just won't win the race. You need to keep up with all the latest breakthroughs in silicone technology. That's where Dow Corning can help.

We supply you with more than just silicones. We also offer you the latest information about product development and application research. Information that will make your formulations easier. And more profitable.

You'll quickly learn that silicones and related specialty materials offer you many advantages over organic compounds. They're available in a wide variety of forms, including fluids, emulsions, compounds and resins. And they're more resistant to severe environmental conditions, like high- and low-temperature extremes, moisture and harsh chemicals. Some are more efficient in small concentrations than organics; others last much longer.

When you work with Dow Corning, you can be confident that you're using the best, most technically-advanced silicone products there are. You choose from the widest selection of silicones available. Problem-solving silicones that help you differentiate your products, and help you grow.

Plus, you get the added value of our technical service, backed by the largest research-and-development investment in the industry. And we have worldwide capabilities, including basic manufacturing operations on three continents. So we're ready to respond wherever—and whenever—you need us.

Quite simply, we offer you the silicone products, the technical service and the marketing support you need. We do more than keep you up to speed. We put you way out front.

Dow Corning Corporation, Dept.
F4019, Midland, MI 48640.
