

UPGRADE YOUR
AutoAnalyzer*
WITH OUR *New*
AS-175™ Automatic Sampler

- 175 sample capacity
- Digital Timing
- Uses 2, 4, or 5 ml disposable sample cups or glass tubes
- Interfaces directly with existing equipment
- Computer compatible

**Cosa presents
Mitsubishi moisture
measuring instruments**

**Ushers in new
standards of performance**

The new Mitsubishi VA-02 Moisture Vaporizer offers shorter measuring time, greater range (starting at 5 ppm) and better reproducibility than conventional direct drying or indirect solvent extraction methods. Trace amounts of water in chips, powders, even solids, can be accurately measured by the VA-02. And it's totally unaffected by atmospheric humidity.

The CA-02 Moisture Meter employs the coulometry principle applied to Karl Fischer titration to eliminate the troublesome procedures involved in conventional titration. It's fully automatic and easy to use.

For complete information on both models, contact your nearby Cosa dealer. Or contact Cosa Corporation, 17 Philips Parkway, Montvale, N.J. 07645. Phone (201) 391-0700.

**HPLC
Solvent Delivery
At Its Best**

**No other pump offers a
more constant flow
without pulses**

Micromeritics' popular 750 HPLC pump is the best in the business for providing constant flow, continuous delivery and reduced pulses. Operates in all modes.

This highly versatile unit represents the latest in pumping precision, reliability and ease of operation. And it is compatible with *any* HPLC system.

The 750 pump electronically smooths flow changes and reduces pulses to an absolute minimum. Typical flow precision is better than $\pm 0.50\%$ at flows from 0-20ml/min. and pressures to 6,000 psi.

The 750 pump can be combined with our unique ternary mixer to give you the simplest, least expensive and most reliable gradient HPLC system available.

For more information, contact
Micromeritics Instrument Corporation,
5680 Goshen Springs Rd., Norcross, GA
